# HAPPY ATHLETE

The HAPPY ATHLETE, meaning the competitive sportsman, who is feeling amazingly well, is in this case the horse. Our HAPPY ATHLETE jumps fences and is able to assess exactly how many galloping steps and jumps he needs to clear the last, all-deciding oxer. He can take his own weight and that of the rider on his hindquarters and demonstrate a breathtaking piaffe. He has the endurance to cover the energy-draining kilometers of a long distance race. How is he able to do that? Because he is healthy and, moreover, he is feeling well. He is mentally and physically capable of delivering the performance expected of him. That gives him a feeling of contentment and – happiness. Health, well-being, contentment ensue when everything is in balance. Balance – that means that all energy levels are exactly as they should be. Not only the physical and the mental ones, but also energies present in the immediate environment.

The effects of the Equusir Scan and Therapy Horsebox is geared toward the horse's physical and mental energy flows. The scientific and veterinary background of its light-therapy application equalizes energetic differences, relaxes strained tissue, muscles, organs, internal systems, and the horse's mental state. Use of the Equusir Scan and Therapy Horsebox supports and complements the treatment of the horse's back, tendon and ligament problems. This gives the HAPPY ATHLETE a chance to relax and ultimately improve on more than just one level. Success factors in equestrian sports are manifold. First class care, excellent veterinary treatment, top training, and strong nerves in competitions.

**The Equusir Scan and Therapy Horsebox is the missing link that connects science and horsemanship to a synergetic unit.**

WE PRESENT FOUR-LEGGED ATHLETES WHO HAD TO BATTLE PROBLEMS AND WON. FOR THESE ATHLETES, THE EQUUSIR SCAN AND THERAPY HORSEBOX PROVIDED THAT MUCH NEEDED LINK.

## Apollo von Pachern. Sheer Power

He is now almost 20, but one can still tell that he is a sports horse, without any ifs or buts. He is a powerhouse, but also sensitive and capable of delivering all his skills when and where they are needed. Being the fighter that he is, he was never particularly prone to injury or visibly sensitive to pain. After a few years in the limelight, he started to develop hoof-joint problems. He no longer moved as lightly and naturally on the new soft grounds as he used to. A set of measures consisting of Equusir-Box-therapy and a different type of shoeing eliminated the problems, allowing him to remain active in sports for another four years.

PERSONAL DESCRIPTION	Apollo von Pachern
AGE	19
SEX	Gelding
BREEDING AREA	Austrian Cross-Breed (ACB)
USE	Jumper
SUCCESS	Victories and S-class placements

### DIAGNOSIS PHYSICAL INDICATIONS

Robust basic constitution. Insensitive to pain. Disassociated equine gait due to hoof-joint condition.

### BOX TREATMENT

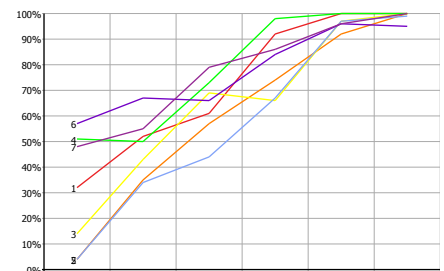

General color-light treatment in the Equusir Horsebox. New shoeing with aluminum-iron.

### CONCLUSION/ MAINTENANCE THERAPY

The initial treatment in the Horsebox combined with a different type of horseshoeing allowed Apollo to remain in sports for four more years.

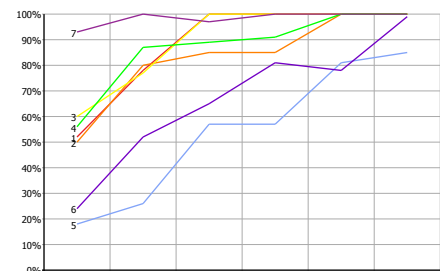

### BEFORE THE TREATMENT

Measuring Cycle from 04 Dec. 2013 at 04:02:25 PM to 29 Dec. 2013 at 02:48:51 PM

### AFTER THE TREATMENT

Measuring Cycle from 28 Apr. 2014 at 02:11:07 PM to 7 May 2014 at 02:34:49 PM

## Roxette. Panic? That was Yesterday!

This mare has everything a good jumper needs. Jumping abilities, the big picture, and attitude. And she knows when to really fire off. Of course, she also has everything that mares are known for. Such as unreliable behavior due to hormonal fluctuations. But also that they are very sensitive and affectionate and give everything for their horseman. Roxette has indeed hormonal fluctuations beyond the normal range and is also somewhat prone to panic, especially, in confined spaces. Loading up and standing in the trailer may well turn into a problem. This condition was further exacerbated by a tendon injury which can only be healed by keeping movements to a minimum, controlled and calm. In the Horsebox, she was treated with red, green and indigo-colored light with excellent success. Roxette is much more content, and the injury healed completely. Now, she is nothing but graceful, sensitive, and affectionate. Panic? That was yesterday!

PERSONAL DESCRIPTION	Roxette
AGE	12
SEX	Mare
BREEDING AREA	Austrian Cross-Breed (ACB)
USE	Jumper
SUCCESS	Federal champion, many S-placements

### DIAGNOSIS PHYSICAL INDICATIONS

Tendon injury, states of panic, flight reaction triggered by oncoming horses.

### BOX TREATMENT

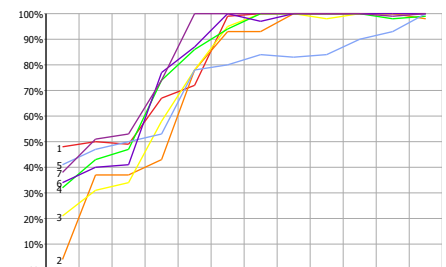

Special color-light sequence counteracting panic and flight response, and for the treatment of her tendon injury. Treatment of her panic over the course of one week: red for ten minutes, green for ten minutes, and indigo for 10 minutes. Treatment of the tendon injury over the course of four weeks: three minutes of green, three minutes of blue, three minutes of indigo, two minutes of green, four minutes of blue, one minute of green, two minutes of yellow, one minute of violet.

### CONCLUSION/ MAINTENANCE THERAPY

For maintenance: light therapy with seven colors and infrared deep heat, two to three times per week. The tendon injury has completely healed. The mare appears calmer, more content and more balanced. sports for four more years.

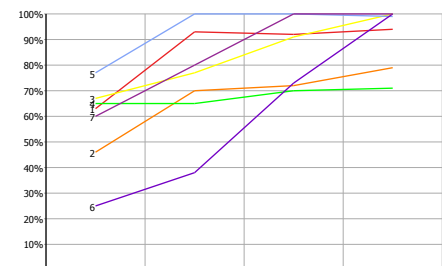

### BEFORE THE TREATMENT

Measuring Cycle from 04 Dec. 2013 at 04:02:25 PM to 29 Dec. 2013 at 02:48:51 PM

### AFTER THE TREATMENT

Measuring Cycle from 20 May 2014 at 03:16:47 PM to 27 May 2014 at 04:402:04 PM

## Quantana. The Path to Calmness

Despite her young age of six years, the mare has been through a lot already. She had a serious injury in the knee area. The ligaments were affected. The severe scar on her hindquarters got inflamed again and again. This mare has a nervous disposition. Permanent pain and therapeutic applications are not particularly suited to strengthen the trust between horse and human. In the horsebox, where no painful treatment is administered whatsoever, no needle pricks and where there is no pulling here and there, the mare calmed down. She was treated with orange, violet, and white light. Quantana has become much calmer. The inflammations in the scar tissue have completely disappeared. The light therapy is an especially beneficial therapy for Quantana's nervous disposition.

PERSONAL DESCRIPTION	Quantana
AGE	6
SEX	Mare
BREEDING AREA	Zangersheide
USE	Jumper
SUCCESS	S-placements

### DIAGNOSIS PHYSICAL INDICATIONS

Nervous disposition. Extensive scar formation after injuries and surgical interventions. Inflammatory scar tissue. Knee-joint condition.

### BOX TREATMENT

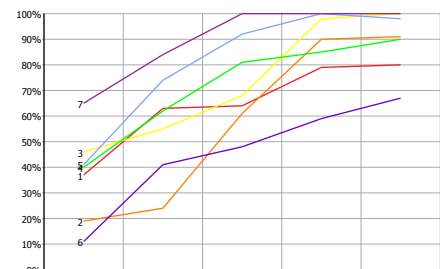

Special color-light sequences over the course of three weeks. Ten minutes of orange, ten minutes of violet and ten minutes of white light. Specifically for the regeneration of the scar tissue, five minutes of green, ten minutes of orange, and two minutes of blue light.

### CONCLUSION/ MAINTENANCE THERAPY

The inflammation in the scar tissue diminished after one week. The horse is more content and balanced. For maintenance: light therapy in the Best Box with seven colors, including infrared deep heat, two to three times per week.

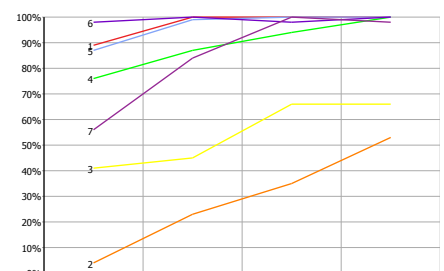

### BEFORE THE TREATMENT

Measuring cycle from 28 Apr. 2014 at 07:51:22 AM to 13 May 2014 at 01:53:33 PM

### AFTER THE TREATMENT

Measuring cycle from 23 Sep. 2014 at 06:01:31 PM to 07 Oct. 2014 at 01:34:28 PM

## Melbourne. Boldness wins the Race!

This six-year-old gelding is so much fun! As a youngster he is as fresh as youngsters should be at his age. Maybe even a bit fresher. But he is astonishingly rideable and willing to perform. However, he likes to tense up and use the rider's hand as support. Especially on the left, which is probably the result of the congenital obliqueness every horse has. Naturally, during training, we work on straightening, loosening the horse and have the horse support itself. In 2013, he started to suffer from a severe skin rash triggered by a fungal infection. Later on, he also sustained an injury of the deep flexor tendon and suspensory ligament. The standing times during convalescence associated with it caused, of course, additional stiffness. Melbourne received intensive care through the horsebox with a frequency of three times per week. Since February 2014 he is back in training and demonstrates, besides an overall improvement, that he has become better at carrying a load and that his rideability has markedly increased. There are still visible traces of the skin rash, but the inflamed spots have all healed.

PERSONAL DESCRIPTION	Melbourne
AGE	6
SEX	Gelding
BREEDING AREA	KWPN
USE	Jumper
SUCCESS	Victories in jumper competitions

### DIAGNOSIS PHYSICAL INDICATIONS

Fungal infection, difficulties with left turns. Tendon injury.

### BOX TREATMENT

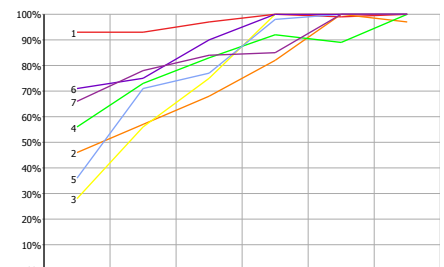

Special color-light sequence against fungal infection: over the course of one week, five minutes of green, eight minutes of indigo. Treatment of the tendon injury over the course of four weeks: three minutes of green, three minutes of blue, three minutes of indigo, two minutes of green, four minutes of blue, one minute of green, two minutes of yellow, one minute of violet.

### CONCLUSION/ MAINTENANCE THERAPY

Skin rash and tendon injury have been treated. Strong improvement of his rideability. For maintenance: light therapy with seven colors and infrared deep heat two to three times per week.

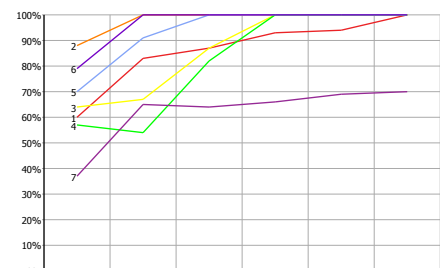

### BEFORE THE TREATMENT

Measuring cycle from 22 Jan. 2014 at 10:47:13 AM to 13 Feb. 2014 at 02:07:14 PM

### AFTER THE TREATMENT

Measuring cycle from 19 Feb. 2014 at 04:54:25 PM to 16 Mar. 2014 at 03:22:23 PM

## Stockinger. The Professor

This old hand is almost 20. Stockinger is the perfect example of a reliable horse. But he can also be quite stubborn and ignore his rider, if he just doesn't feel like it. Stockinger is also developing a few old men's health problems. His metabolism no longer works quite as well. His coat is dull. In the Horsebox, he was treated with red, green, and violet light. He is more content, less grumpy and therefore more rideable and runs nice even rounds on the course.

PERSONAL DESCRIPTION	Stockinger
AGE	20
SEX	Gelding
BREEDING AREA	Holstein
USE	Jumper, rascal
SUCCESS	Youth-/ Junior state champion

### DIAGNOSIS PHYSICAL INDICATIONS

Metabolism problems, concentration difficulties.

### BOX TREATMENT

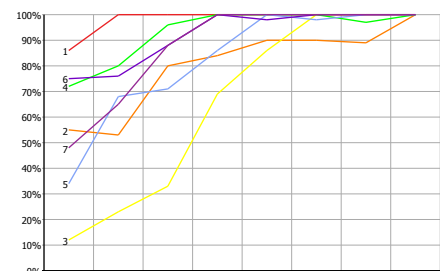

Color-light sequence to stimulate metabolism. Over the course of one week: Ten minutes of green, ten minutes of blue, ten minutes of violet.

### CONCLUSION/ MAINTENANCE THERAPY

Improved metabolism, shiny coat. Improved concentration and pleasant rideability. For maintenance: light therapy with seven colors and infrared deep heat two to three times per week.

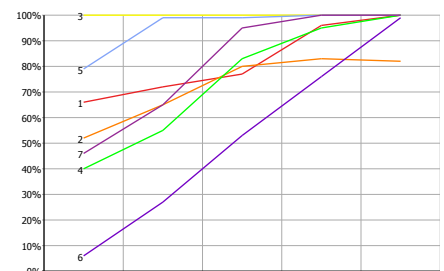

### BEFORE THE TREATMENT

Measuring cycle from 23 Jan. 2014 07:16:09 PM to 15 Feb. 2014 02:53:01 PM

### AFTER THE TREATMENT

Measuring cycle from 14 Feb. 2014 at 04:55:01 PM to 28 Feb. 2014 at 01:59:26 PM

## Eskada. The Relaxed One

The seven-year-old mare is a one person horse. She is ambitious and courageous, but also sensitive, and sensitive to noise. If she gets stressed, attack is the best means of defense for her. Of course, this results in rough and bumpy rounds around the course and leads to knock-downs that are entirely unnecessary. Her digestion is also a little irritable. She is prone to diarrhea. The goal of a therapy in the horsebox was primarily stress reduction. From February to April 2014, she had a busy schedule. But already in April, Eskada appeared much calmer. The digestive problems have also stabilized.

PERSONAL DESCRIPTION	Eskada
AGE	7
SEX	Mare
BREEDING AREA	Austrian Cross-Breed (ACB)
USE	Jumper
SUCCESS	Newcomer

### DIAGNOSIS PHYSICAL INDICATIONS

High stress level. Digestive problems. Stool water and diarrhea.

### BOX TREATMENT

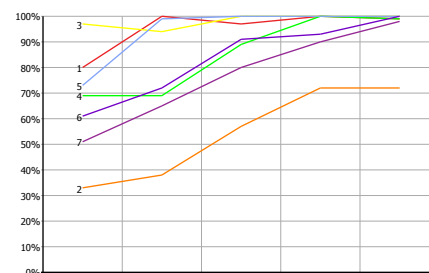

Special color-light sequences against diarrhea and stress over the course of two weeks: orange and green, each for 15 minutes. Over the course of one week: Ten minutes of orange, ten minutes of green, and ten minutes of blue.

### CONCLUSION/ MAINTENANCE THERAPY

Improved metabolism, shiny coat. Improved Stool water and diarrhea have disappeared. For maintenance, 30 minutes in the Equusir Best Box with seven colors and infrared deep heat, two to three times per week.

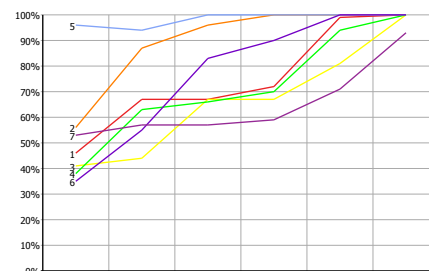

### BEFORE THE TREATMENT

Measuring cycle from 29 Jan. 2014 05:28:41 PM to 16 Feb. 2014 06:54:05 PM

### AFTER THE TREATMENT

Measuring cycle from 29 Feb. 2014 at 12:45:28 PM to 21 May 2014 at 11:47:16 AM

## L'Emporio. The Lion

The eleven-year-old gelding has always needed a lot of support. He has recurring concentration problems, is prone to allergies, has digestive problems and has already suffered several bouts of colic. In addition, he suffered two falls in 2013. The standing times during rehabilitation weakened the musculature. In February 2014, he was taken into the Equusir-BEST-Box. He was treated with yellow, green, and orange light. The result was amazing. L'Emporio is rested, outright exuberant and presents himself strong and efficient in jumping and proves that he has got what it takes – the heart of a lion.

PERSONAL DESCRIPTION	L'Emporio
AGE	11
SEX	Gelding
BREEDING AREA	Hannover
USE	Jumper
SUCCESS	S-Placements

### DIAGNOSIS PHYSICAL INDICATIONS

Flatulence, problems with bowel evacuation, colic, fungal infection in the corners of the mouth, hair loss, sore spots.

### BOX TREATMENT

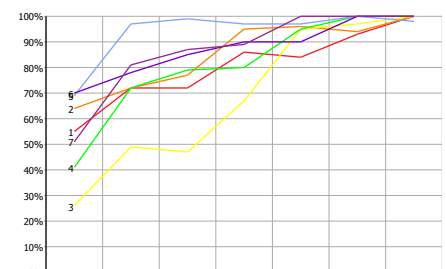

Color-light sequence against fungal infection over the course of two weeks: ten minutes of yellow, ten minutes of green, and ten minutes of orange light. Gastrointestinal therapy over the course of one week: ten minutes of green, ten minutes of orange, ten minutes of turquoise, and ten minutes of indigo.

### CONCLUSION/ MAINTENANCE THERAPY

No further colic episodes since the start of the treatment in the Equusir-BEST-Box. Full strength and high spirits in the competitions with excellent jumping sequences. For maintenance, light therapy with seven colors and infrared deep heat in the Equusir-BEST-Box two to three times per week.

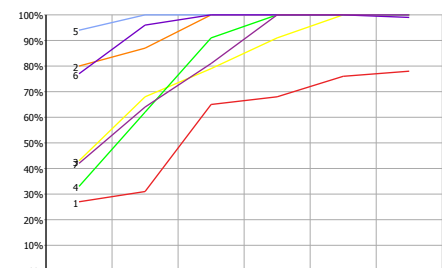

### BEFORE THE TREATMENT

Measuring cycle from 23 Jan. 2014 11:48:21 AM to 4 Feb. 2014 04:01:40 PM

### AFTER THE TREATMENT

Measuring cycle from 27 May 2014 at 11:33:37 AM to 18 June 2014 at 15:19:24 PM

## Lancasto. The Individualist

The twelve-year-old gelding is in his best competition years. He is, like all competitive sportsmen, an individualist. His special feature? He is very sensitive and very unforgiving. Once unjustly scolded, he takes his time until he decides to be cooperative again. Due to the anatomic angle of the hindquarters, he struggles to carry loads, but is astonishingly effective on the course. Skin fungi are a recurring problem for him. Through the therapy in the Horsebox with a light combination consisting of yellow, green, and orange, all fungus has disappeared. We hope that Lancasto will also remember the good!

PERSONAL DESCRIPTION	Lancasto
AGE	12
SEX	Gelding
BREEDING AREA	Bavarian Cross-breed
USE	Jumper
SUCCESS	Vice State Champion S-Placements

### DIAGNOSIS PHYSICAL INDICATIONS

Problems with free shoulder mobility, blockages in the neck area, problems with load carrying on the hindquarters. Fungal infection.

### BOX TREATMENT

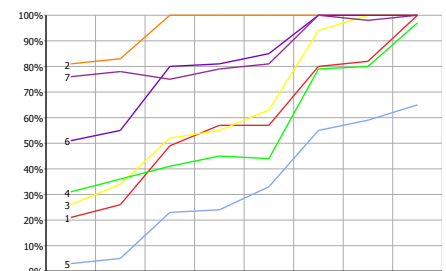

Color-light therapy specifically targeted at fungal infections. Over the course of two weeks: ten minutes of yellow, ten minutes of green, and ten minutes of orange.

### CONCLUSION/ MAINTENANCE THERAPY

For maintenance: two to three times per week color-light therapy with seven colors and infrared deep heat. The horse has become more self-confident, is more approachable, more content, and rested.

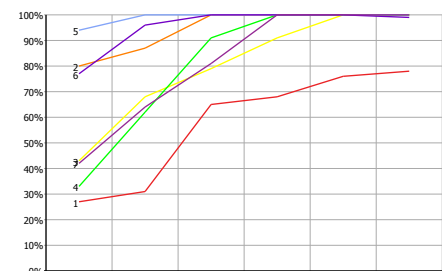

### BEFORE THE TREATMENT

Measuring cycle from 8 Apr. 2014 02:28:16 PM to 29 Apr. 2014 11:31:41 AM

### AFTER THE TREATMENT

Measuring cycle from 5 May 2014 at 09:29:00 AM to 13 May 2014 at 10:40:28 AM

## Colmar. The Powerful

This gelding is imposing! He can boast of big successes and is a true champion. He appears self-confident and possessive. However, upon closer acquaintance, one learns that he needs a lot of encouragement and moral support. If something is wrong, he reacts with apathy, withdraws, and becomes depressed. In August 2013, he needed crucial ligament surgery. Pain and rehabilitation resulted, of course, in a loss of muscle mass and severe muscle tensions. This horse, only six years old, was in urgent need of holistic energetic support. In February 2014, he was released for work again. He appeared refreshed and eager to move. The muscle build-up is making good progress. For such a sensitive sports horse as Colmar, the Equusir-BEST-Horsebox has been a true blessing.

PERSONAL DESCRIPTION	Colmar
AGE	9
SEX	Gelding
BREEDING AREA	Holstein
USE	Jumper
SUCCESS	Gold Tour, Grand Prize

### DIAGNOSIS PHYSICAL INDICATIONS

Cartilage tear, cruciate ligament rupture, tenseness of the entire locomotor system due to long standing times following surgical intervention.

### BOX TREATMENT

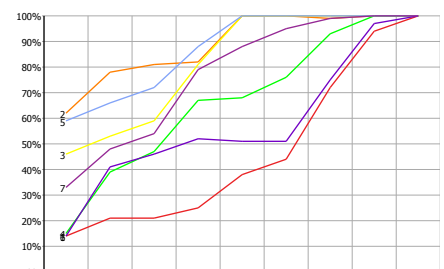

Color-light sequence for muscle and cartilage build-up over the course of ten weeks: three minutes of green, four minutes of yellow, three minutes of green, four minutes of orange, six minutes of blue, two minutes of red, four minutes of orange, three minutes of red.

### CONCLUSION/ MAINTENANCE THERAPY

Excellent muscle build-up. Since 2015, active in sports again. For maintenance: light therapy with seven colors and infrared deep heat in the Equusir- BEST-Box two to three times per week.

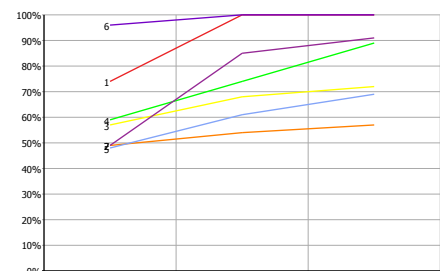

### BEFORE THE TREATMENT

Measuring cycle from 3 Dec. 2013 11:57:45 AM to 15 Dec. 2013 2:51:24 PM

### AFTER THE TREATMENT

Measuring cycle from 23 Sep. 2014 at 06:07:49 AM to 4 Oct. 2014 at 12:29:38 PM

## Casanova. The gangly Youngster

This six-year-old horse is a text-book-Youngster. Eager to work and learn, rideable, confident. His muscle build-up cannot quite keep pace with him. He often reminds us of the young, lanky lads, whose arms and legs seem to grow faster than the rest of their bodies. In 2014, Casanova suffered a jaw fracture that required surgical repair. On top of that, he also sustained a tendon injury. We supported him with indigo, green, and yellow-colored light in the Equusir-BEST-Horsebox. Everything has healed really well. Casanova receives maintenance therapy three times a week with seven different light colors.

PERSONAL DESCRIPTION	Casanova
AGE	6
SEX	Gelding
BREEDING AREA	Bulgarian CB
USE	Jumper
SUCCESS	Victories in jumper competitions

### DIAGNOSIS PHYSICAL INDICATIONS

Weak ligaments due to growth spurts, jaw fracture, jaw surgery. Tendon injury front right Delayed muscle build-up.

### BOX TREATMENT

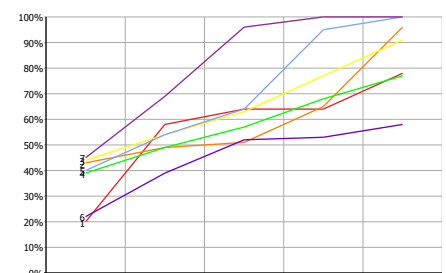

Special color light sequences for muscle and cartilage build-up. Over the course of six weeks: three minutes of green, four minutes of yellow, four minutes of orange, six minutes of blue, two minutes of red, four minutes of orange, three minutes of red.

### CONCLUSION/ MAINTENANCE THERAPY

For maintenance, Equusir-BEST-Box with seven colors and infrared deep heat two to three times. The tendon injury and jaw fracture are completely healed. Muscle build-up has improved significantly.

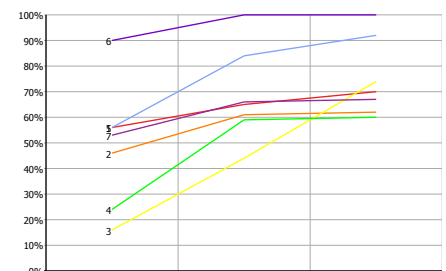

### BEFORE THE TREATMENT

Measuring cycle from 18 Jan. 2014 05:33:10 PM to 5 Feb. 2014 02:29:40 PM

### AFTER THE TREATMENT

Measuring cycle from 24 Feb. 2014 at 09:45:40 AM to 7 Mar. 2015 at 04:12:47 PM

## Carano. The nice Guy

The eight-year-old stallion comes in a size X-large, but yet everyone calls him Baby. He is calm, but sensitive and cooperates with every rider who does not bother him too much. However, if he feels that too much is expected of him, his performance is severely reduced. From a purely physical point of view, he is thrown a little off balance when strained over a longer period. A problem that originates from the hindquarters. We wanted to eliminate this performance obstacle to Carano and have been giving him the therapeutic benefit of the Horsebox since February 2014. Green, yellow, and violet light contributed to the muscle build-up. Carano is visibly and perceptibly much more balanced.

PERSONAL DESCRIPTION	Carano
AGE	8
SEX	Stallion
BREEDING AREA	Oldenburg
USE	Jumper
SUCCESS	Newcomer

### DIAGNOSIS PHYSICAL INDICATIONS

Imbalances of the hindquarters with workloads over longer periods of time.

### BOX TREATMENT

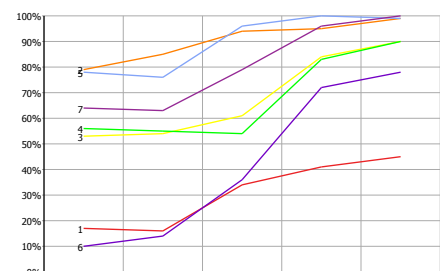

Special color-light sequence for muscle buildup over the course of three weeks: two minutes of green, four minutes of yellow, two minutes of green, three minutes of violet, two minutes of green, three minutes of violet, two minutes of green.

### CONCLUSION/ MAINTENANCE THERAPY

Excellent muscle build-up, with increased riding stability and improved perceptive faculty. For maintenance: color-light therapy with seven colors and infrared deep heat two to three times per week.

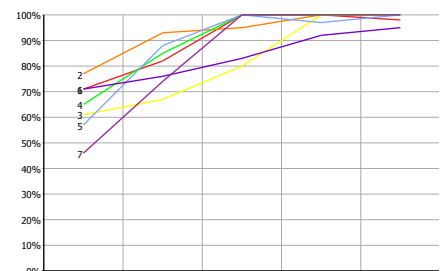

### BEFORE THE TREATMENT

Measuring cycle from 4 Dec. 2013 05:11:05 PM to 12 Dec. 2013 05:11:15 PM

### AFTER THE TREATMENT

Measuring cycle from 18 Jan. 2014 at 10:54:00 AM to 5 Feb. 2014 at 09:41:11 AM

## Axel. The Committed One

The eleven-year-old gelding is a committed jumper. He is also sensitive and cooperative. But he does have a problem with confidence. With a lack of confidence in himself and, in stress situations, also in the rider. In these cases, he sees flight as his only option. Frequently, he is too rushed on the course. Tensions in the forehead and shoulder confirm this impression. Physical therapy in addition to the horsebox treatment as well as a special food supplement turned Axel into a calmer horse. His motion sequence is more regular which facilitates a consistent muscle build-up. Long-term maintenance therapy resulted in Axel's overall improvement. He feels more at ease with his rider. And the rider with him!

PERSONAL DESCRIPTION	Axel
AGE	11
SEX	Gelding
BREEDING AREA	Austrian Cross-Breed (ACB)
USE	Jumper
SUCCESS	International S-Placements

### DIAGNOSIS PHYSICAL INDICATIONS

Tensions of the adductor muscles of the forehead. Painful musculature in the shoulder region. Unilaterally built-up musculature in the croup region. Lack of confidence and self-assurance.

### BOX TREATMENT

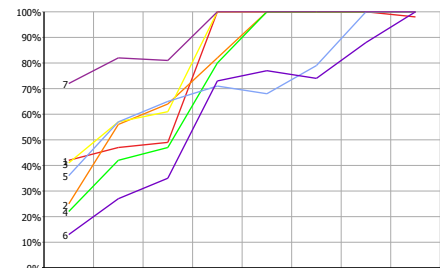

For muscle build-up and self-confidence: color-light variation over the course of four weeks: six minutes of blue, six minutes of green, eight minutes of orange.

### CONCLUSION/ MAINTENANCE THERAPY

Tensions and blockages were loosened. The unilateral muscle build-up of the croup has been balanced out. The horse is less afraid and is better to work with. For maintenance: application of color-light therapy in the Equusir BEST Box with seven colors and infrared deep heat two to three times per week.

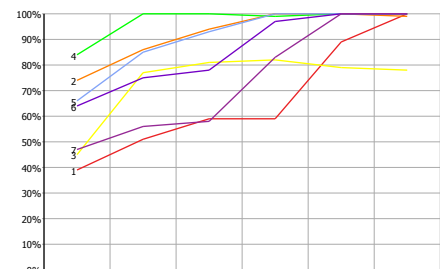

### BEFORE THE TREATMENT

Measuring cycle from 3 Dec. 2013 12:48:46 PM to 17 Dec. 2013 12:18:52 PM

### AFTER THE TREATMENT

Measuring cycle from 24 Mar. 2014 at 05:54:43 PM to 30 Mar. 2014 at 08:16:44 PM

## Sol Campbell. Strengthening the Determined Competitor

The eight-year-old stallion is all one could wish for in a jumper. Calm, unfazed, and a fighter. However, this go-getter on the course also has a few weak spots that need strengthening so that the determined competitor also turns into a winner. Soft ligaments, for example, especially slow muscle build-up. The softness also extends to his hoofs. Persistent thrush, strong tendency toward developing mallenders are causing recurring training restrictions. After an intensive treatment in the Horsebox, Sol Campbell has noticeably more power, improved rideability and - the daily messing around with all kinds of substances in the hoof frog has become superfluous. The thrush is gone. We will continue with the maintenance therapy in the Horsebox in any case.

PERSONAL DESCRIPTION	Sol Campbell
AGE	8
SEX	Stallion
BREEDING AREA	Austrian Cross-Breed (ACB)
USE	Jumper
SUCCESS	M-victories and placements

### DIAGNOSIS PHYSICAL INDICATIONS

Delayed muscle build-up, mallenders, and thrush.

### BOX TREATMENT

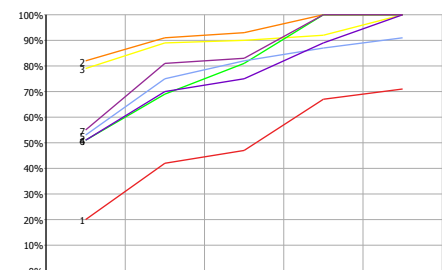

Special color-light combination for muscle build-up over the course of four weeks: ten minutes of red, ten minutes of indigo, ten minutes of white.

### CONCLUSION/ MAINTENANCE THERAPY

The horse has considerably more power and zeal. Improved muscle build-up and load carrying on the hindquarters. Absence of mallenders and thrush. For maintenance: color-light therapy with seven light colors and infrared deep heat two to three times per week.

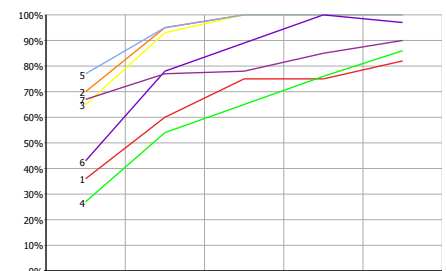

### BEFORE THE TREATMENT

Measuring cycle from 13 Jan. 2014 12:32:27 PM to 3 Feb. 2014 02:18:28 PM

### AFTER THE TREATMENT

Measuring cycle from 19 Jan. 2015 at 02:08:51 PM to 2 Feb. 2015 at 11:12:32 AM

## Unlimited Animo. Back to Joie de Vivre

He was a promising sports horse. His fate, however, prevented a career on the course. During a period of unclear ownership rights he did not receive the necessary attention and medical care. His conditions were so serious that they considered putting him to sleep. He was hardly able to walk, not to mention being ridden. In addition, he was just skin and bones and presented a picture of misery. For Animo, the treatment with the Equusir-BEST-Box marked a turning point. An intensive treatment, followed by maintenance therapy alleviated the pain and stabilized the gait pattern. He gained weight, and his zest for life returned. Animo is able to move normally again, can be carefully ridden and has very good prospects of more good horse years.

PERSONAL DESCRIPTION	Unlimited Animo
AGE	14
SEX	Gelding
BREEDING AREA	Austrian Cross-Breed (ACB)
USE	Saddle horse
SUCCESS	Freedom from pain

### DIAGNOSIS PHYSICAL INDICATIONS

Head of the suspensory ligament of the hindquarters frayed on both sides, post-traumatic edemas, neurotomies at the hindquarters on both sides. Poor overall health condition, changed gait pattern, strong pain reactions, fear, no zest for life.

### BOX TREATMENT

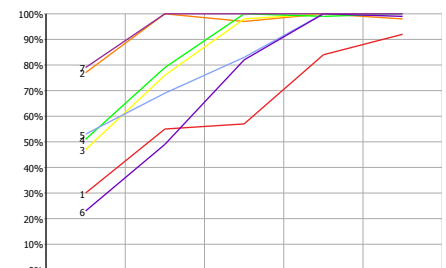

Intensive treatment in the Equusir-BEST-Box with seven colors and infrared deep heat. Subsequent special color-light combinations with green, yellow, indigo, orange, blue, and turquoise. In addition: daily laser therapy and treatment with the Equusir-BIOS Neurostimulation Blanket.

### CONCLUSION/ MAINTENANCE THERAPY

Continued treatment in the Equusir-BEST-Box with seven light colors and infrared deep heat. The horse is now pain-free, the gait pattern has returned to normal. He has gained weight and can be ridden again.

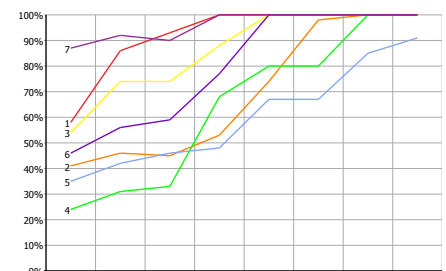

### BEFORE THE TREATMENT

Measuring cycle from 25 Aug. 2014 12:54:49 PM to 4 Sep. 2014 03:45:00 PM

### AFTER THE TREATMENT

Measuring cycle from 6 Mar. 2015 at 06:45:59 PM to 13 Mar. 2015 at 06:05:41 PM
